Subject: STK Properties

Hi,

Just wanted to follow up our phone conversation from this morning. I spoke with Ginny Henderson in the Inactive Hazardous Sites group regarding the site. The NRP that I would ask you to file for the low levels of residual petroleum your reports have shown will not cover the PCE. Without having seen the data, she was of the opinion that since the PCE is above 2Ls, it needs to be addressed. If your client has shown that a source does not exist on the property, they would most likely not be held responsible. However, their group might require a bit more investigation (contouring to show direction of gw flow, etc) in order to make that determination. I have given her a copy of the reports to look over.

Thanks,
Michele
